

Media Trends in Artificial Intelligence Development and Regulation:

1 AI Innovation & Technology

Focus:

- new AI models (e.g. generative AI)
- advancements in machine learning
- robotics & automation

Keyword:

“AI breakthrough”, “generative AI impact”, “machine learning advancement”

3 AI Ethics & Risks

Focus:

- bias, fairness
- misinformation, deepfakes
- job displacement

Keyword:

“AI ethics issue”, “AI risk society”, “AI bias problems”

2 AI Regulation & Government Policy

Focus:

- laws, regulation and bans
- government strategies
- global AI governance

Keyword:

“AI regulation policy”, “government AI law”, “AI governance”

4 AI in Business & Industry

Focus:

- companies using AI
- productivity & automation
- economic impact

Keyword:

“AI in business”, “AI in industry”, “AI productivity companies”

visualization

short summary

This study applies text mining techniques in R to analyze media trends in artificial intelligence across innovation, regulation, ethics, and business domains.

The findings highlight key areas of focus in global discussions, demonstrating how AI is shaping technological, economic, and societal landscapes.

Features

Step 1

Tokenization

split the text using spaces, removing stopwords and punctuations

Step 2

Tolower function

Covert the text to lowercase for uniformity

Step 3

Lemmatization

Standardize the text data to its root form for better classification

Step 4

TF-IDF Calculation

Identify the significance of words in the context of the document

Step 5

Term Matrix Creation

Store the dictionary and the frequency count in a term matrix
